PG2	Lacquer	Lacquer	Grained veneer
PG3	Lacquer	Veneer	Lacquer or veneer
PG4	Lacquer	Veneer	Grained veneer

Planning information for handles

Handles will be delivered in the stainless steel look for all finishes as standard.
They are also available in anthracite at no extra cost; if required, please state this clearly on the order.

The colour and wood finishes have been specifically created for Gwinner models and can therefore not be found in any standard. Colour samples provide an approximate reproduction and serve only as a guide.

Product information

Atena has been awarded the DGM mark of quality by the German Furniture Quality Association

Country of manufacture: Germany

Materials used:

The carcass and front are made from lacquered or veneered E1 chipboard. The outer sides and shelves are 19-mm thick, the rear panels are 5-mm thick. Cover panels, plinth panels, shelf side panels and shelves are 26-mm thick. Cover panels, plinth panels and contrasting surfaces are also available in veneer depending on the finish.

The drawers are mounted on soft-close, partial-extension Quadro runners, and have been tested 40,000 times.

Doors and glass doors are mounted on nickel-plated, three-way adjusting, fast-assembly metal cup hinges, which have been tested 40,000 times.

Display-unit doors, glass shelves and glass panels are made from clear float glass .

Veneers:

Please note that every piece of precious veneer is unique and can vary widely from one veneer trunk to another by its very nature. Despite our veneer specialists taking the greatest care, variations from brochure illustrations and unit samples cannot be ruled out.

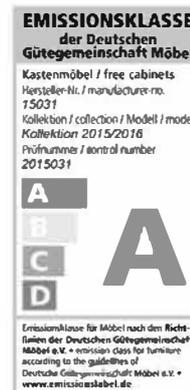

Load-bearing capacity:

Lowboard drawers have a load-bearing capacity of 15 kg; all other drawers have a load-bearing capacity of 10 kg when loaded evenly. Wooden shelves have a load-bearing capacity of 15 kg; glass shelves have a load-bearing capacity of 10 kg; additional information relating to load-bearing capacity can be found on the corresponding element.

Home hygiene:

Atena meets the requirements for a healthy home environment, it has been tested for harmful substances in accordance with RAL-GZ 430/1-1.

Care instructions:

Wipe with a dry duster or a slightly damp cloth. Our lacquers are highly resistant to abrasion in accordance with DIN 68861.

Electrics:

All lighting elements and connection cables are VDE-tested.

Energy usage:

Die eingesetzten LED-Beleuchtungen enthalten eine Lichtquelle der Energieeffizienzklasse <F> auf einer Skala von A (höchste Effizienz) bis G (geringste Effizienz). Die Lichtquellen in den LED-Beleuchtungen sind nicht tauschbar.

Subject to errors, as well as design, colour and material modifications as part of technical progress.

General planning information

Quality features: Visible front and carcass parts are lacquered; cover panels, plinth panels and contrasting surfaces can – depending on the finish – also be veneered.

The drawers are mounted on soft-close, partial-extension Quadro runners. Soft-close full-extension runners are available at a surcharge.

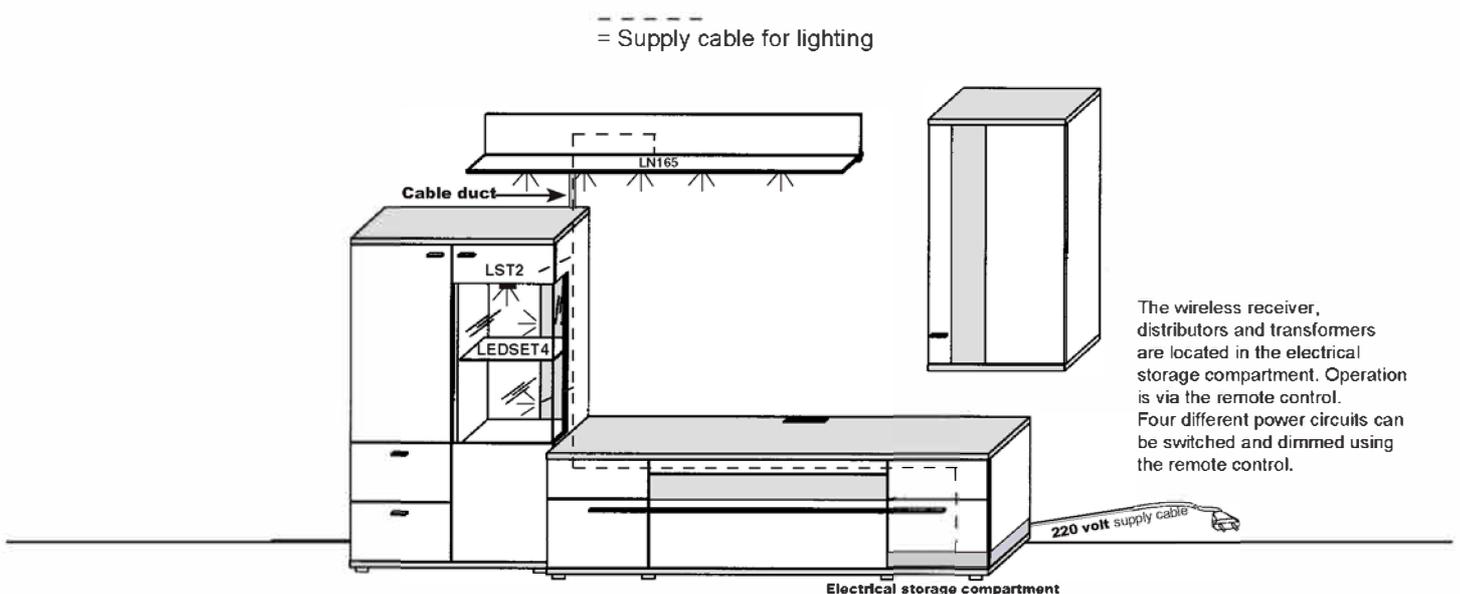

The all-metal clip-on hinges are adjustable in three directions and are soft-closing as standard.

Please note that the timbers used for the veneers are a genuine natural product, for which colour and structural differences, knots and darker growth patterns cannot be ruled out, and cannot therefore be seen as a quality defect. Despite our specialists taking the greatest care, variations from brochure illustrations and unit samples cannot be ruled out. For oak timber, timbers with cracks and knots are purposely chosen and filled to be darker. Only this time-consuming process gives the timber surfaces their natural character. We would like to expressly state that these growth and processing characteristics are desired features on the Atena, and cannot therefore be seen as a quality defect.

Electrical installation: The following drawing offers a schematic view of the electrical installation positions and routing. The illustrations of the wiring, lighting and electrical storage compartment are only symbolic and are not to scale. Except for the cable duct, the wiring shown is on the rear of the elements.

A white, paintable cable duct is supplied to optimise the cable routing between the lowboard and wall units or shelves. The cable duct can be glued or screwed to the wall. Depending on the cable cross-section, one to three cables can be laid in the duct.

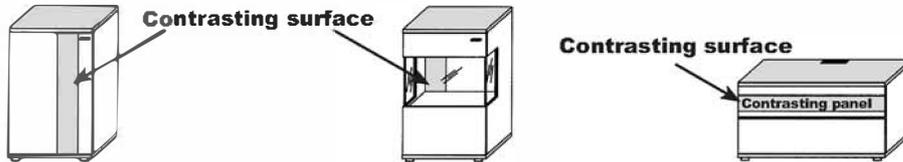

Lighting example for AT2 wall combination

General planning information

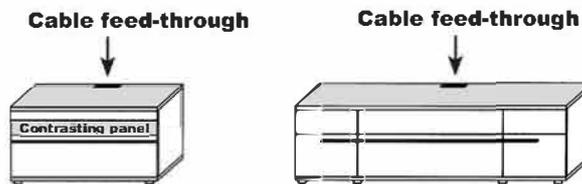

Cover panels: In either depth, these can be planned individually or across several elements, the maximum length of the cover panels is 260 cm.

Contrasting surfaces: Areas on the front or display-unit rear panel that are different in colour or material. Available in lacquer, veneer or grained veneer.

Handles and cable feed-throughs:

Both are supplied in the stainless steel look as standard; also available in the anthracite finish – if required, simply state this clearly on your order. The colour of the handles and cable feed-throughs always match.

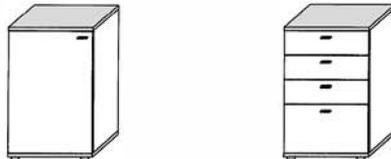

The cable feed-through has a flap and a sealing brush to guide cables easily.

Elements that feature this symbol  in the illustrations have a cable feed-through as standard. If this is not required, please note this clearly on your order.

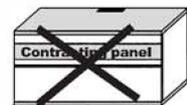

Reductions:

Width reductions are possible on elements with closed door or drawer fronts, the surcharge is calculated at 30% of the element price.

Width can be shortened.

As an exception, lowboards with contrasting panels or continuous handles cannot be shortened.

Depth reductions are only possible on elements with closed door fronts, the surcharge is calculated at 30% of the element price.

Depth can be shortened.

Depth cannot be shortened.

Display units cannot generally be shortened.

Two-way reductions: Should an element be shortened in depth and width, the surcharge is calculated at 50% of the element price.

Shelf reductions are possible, both in terms of length and height, at no extra cost; however, depth reductions are not possible for construction reasons.

Drilled holes are possible in a line on cabinets. The surcharge per element is . It is not possible to drill holes in a line on shelf side panels.

If you are unable to meet your planning requirements using standard elements, please get in touch. We will try to find a solution.

Planning and ordering information

Atena can be configured in any way using the planning programme

furn plan

Only the current type list applies for price, dimensions and design information.

Have you included everything in your plan?

The following information is required for the Atena:

- **The lacquer colour for front and carcass**
- **The lacquer colour or veneered finish for plinth and cover panels**
- **The lacquer colour or veneered finish for side panels and shelves**
- **The lacquer colour, veneer or grained veneer finish for the contrasting surfaces**
- **The handle finish**
- **Positioning sequence or sketch for freely designed configurations**
- **Accessories and lights if required**
- **Send orders via e-mail to: auftrag@gwinner.de**

! When including lighting, we recommend using the electrical storage compartment with radio remote control. As a result, all transformers, connectors and distributors are neatly stored away but are still easily accessible; all lighting can be operated using the remote control.

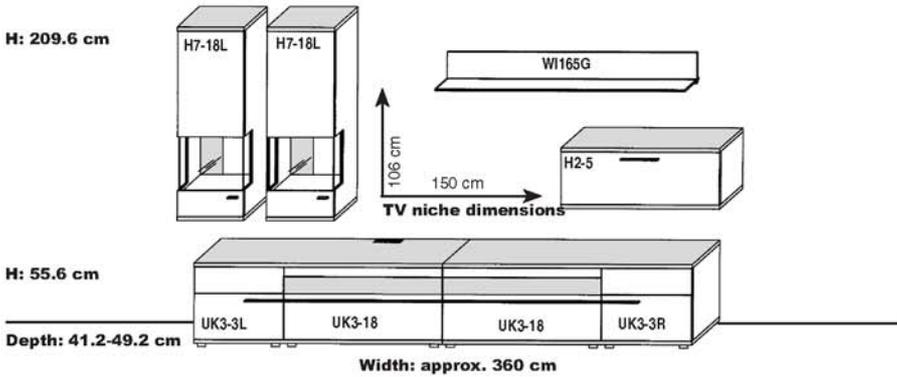

Please note that the delivery time may be extended if an order is unclear or incomplete. Please ensure you provide all details when placing your order to enable us to process your order quickly and correctly.

Lowboards 55.6 cm high, 45-120 cm wide, 49.2 cm deep (3-increment)

Dimensions in cm directly beside the corresponding picture.

T=Door S=Drawer SB=Drawer with contrasting panel

DS=Double drawer (1 front piece, 2 drawers that open simultaneously)

Planning information:

It is possible to freely plan lowboards with a width of up to 120 cm; continuous cover panels are available at a maximum length of 260 cm. Lowboards with a width greater than 165 cm are manufactured separately and cannot be planned alongside other lowboards.

Behind drawers with contrasting panels and drawers marked with a *, you will find a device niche in the upper section; an IR repeater is needed to operate devices.

Article	Order no.		Description
Transformers and remote controls			
LED transformer, max. 15 watt	LEVG15		12 volt/15 watt, suitable for max. 6 connections. Cable length approx. 5 metres, switch on the supply cable. 
LED transformer, max. 30 watt	LEVG30		12 volt/30 watt, suitable for max. 10 connections. Cable length approx. 5 metres, switch on the supply cable. 
Radio remote control for LED lighting	FKS4		 A maximum of four power circuits can be switched and dimmed using the remote control. Six light fixtures can be included in each power circuit. If required, the remote control is connected between the transformer and lighting.
Radio remote control set with transformer			
Radio remote control inc.: LED transformer, max. 30 watt LED transformer, max. 60 watt	FKS4-30 FKS4-60		
1 electrical storage compartment without radio remote control			
Fitted behind doors	LES		 Please specify the element in which the electrical storage compartment should be fitted. There is no radio remote control included in this electrical storage compartment. The upper cover is a removable wooden shelf, and the full cabinet depth can therefore be used.
IR repeater			
IR repeater Receiver on stand, see figure.	IRST		 The IR repeater passes signals from standard IR remote controls into the unit. A DVD player can therefore be operated from behind a closed front, for example. Incoming IR signals are received by the receiver and passed on inside the unit via the transmitter. The repeater does not require its own remote control. A 220-volt mains connection is required for operation. IR = infrared
Drawers: Special equipment			
Full-extension runner surcharge	VZ320		For 41.2-cm-deep elements
Full-extension runner surcharge	VZ400		For 49.2-cm-deep elements
For elements 45 cm wide, 41.2 cm deep	E1-45		Drawer organiser for shallow drawers with three dividers
